COOL SPORT™ COLORS (6100 SERIES)

Cool Sport™ Color (6100 Series) plastisol inks are newly reformulated using our proprietary CoolTech™ technology. The series features 13 bright, ready-for-use team-related colors.

CoolTech™ uses the same chemistry found in our popular Cool White™ (7022). CoolTech™ adds strength, elongation, and elasticity to inks, and enables Cool Sport™ inks to be printed on multiple substrates.

Cool Sport™ Colors are part of our expanding line of FlexCure™ screen printing inks. FlexCure™ offers a 'flexible' curing range - from a low 275°F/135°C to the standard 325°F/163°C.

COOL SPORT™ COLORS (6100 SERIES)

- Brilliant, ready-for use, popular team and sport colors
- High pigment load for maximum coverage on dark garments, thus eliminating the need for under-basing
- Suitable for printing on a variety of substrates including 100% cotton, 50/50 blends, non-woven polypropylene and some polyesters
- Print through higher mesh counts on light colored garments or reduce to obtain soft-hand, opaque prints
- Smooth, creamy and even consistency, and prints beautifully on automatic and manual printers

Cool Sport™ Color (6100 Series) plastisol inks are available from International Coatings' exclusive network of distributor companies.

Contact International Coatings at 1 (800) 423-4103 (within the U.S. only) or 1 (562) 926-1010; or visit www.iccink.com for more information.
